LOLER AND YOUR LIFTING EQUIPMENT

WE ASSESS SO WE CAN PROTECT.

The whole reason we exist is to keep people from harm's way. We assess, so we can protect. If you operate work equipment that lifts or lowers a load, and that includes all lifting accessories too, we've got it covered.

KEEPING YOU SAFE

Our team of highly skilled Engineer Surveyors know everything there is to know when it comes to the Lifting Operations and Lifting Equipment Regulations (LOLER). We'll help keep you safe and legally compliant and, what's more, we'll do this with minimum disruption to your business.

If you own or operate anything from telescopic handlers, lifts or excavators right through to forklift trucks or lifting accessories including any chains, ropes, slings etc, it's important that you're working in line with LOLER at all times. As part of these regulations, maintaining a thorough programme of examinations is absolutely essential, making sure your equipment is safe to use and remains fit for purpose even after it's been operational for some time.

LOLER aims to protect workers from lifting equipment and handling accidents by ensuring that:

- ✓ The right lifting equipment is selected and appropriately marked with safe working loads
- ✓ Lifting operations are properly planned, managed and carried out in a safe manner
- ✓ Lifting equipment is thoroughly examined at suitable intervals by a competent person.

On top of this, it's vital that detailed risk assessments are completed at every stage, from the initial selection through to installation, in-service safety and stability and recommissioning/decommissioning.

With over 150 years in engineering compliance, we really know what we're doing. We'll partner with you every step of the way to make sure you're working in line with all the relevant guidance. We'll advise on the frequency of your examinations in accordance with all legislation and we'll make sure they're completed on time, every time too.

In line with LOLER guidance, we're more than competent:

- ✓ ISO/IEC 17020 compliant
- ✓ 'Type A' accredited
- ✓ Independent and impartial, without favour or profit from recommended repairs
- ✓ Our Engineers Surveyors meet a minimum required standard of competence (required experience of 5 years)
- ✓ Annually assess our internal policies and training
- ✓ Formal feedback and improvement procedures are in place
- ✓ Audits of on-site inspections are undertaken.

We take your risk seriously at Vulcan Inspection Services and leave no stone unturned when it comes to the safety of your business and your people.
